

Executive Summary

This report details the findings of an automated brand discovery and infrastructure correlation scan performed against the `Walmart.com` seed domain. The objective of this scan is to map the organization's decentralized domain portfolio, identify "Shadow IT" (legitimate domains managed outside of the primary corporate registrar), and distinguish these from unauthorized impersonation threats.

1. Primary Corporate Infrastructure

The following domains were identified as part of the core corporate portfolio, correctly consolidated under the primary enterprise registrar.

DOMAIN	INFRASTRUCTURE SIGNALS	VERIFIED REGISTRAR	STATUS
			✓ Consolidated
wal-mart.com	NS Match (ns1.walmart.com)	CSC Corporate Domains	✓ Consolidated
	(ns1.walmart.com)		✓ Consolidated

2. Discovered Shadow IT / Vendor Sprawl

The Blackveil engine successfully correlated the following domains to Walmart's infrastructure (via shared cryptographic keys, DMARC reporting endpoints, and custom nameserver pools). However, WHOIS analysis reveals these domains are registered at a competing enterprise registrar, indicating portfolio fragmentation and vendor sprawl.

These represent immediate consolidation opportunities for the primary registrar.

DISCOVERED DOMAIN	CORRELATION EVIDENCE	VERIFIED REGISTRAR	STATUS
	(pdns1.ultradns.net, etc.)		 Consolidation Target
walmart.ca	NS Match (pdns1.ultradns.net, etc.)	MarkMonitor Inc.	 Consolidation Target
	(pdns1.ultradns.net, etc.)		 Consolidation Target
walmart.com	NS Match (pdns1.ultradns.net, etc.)	MarkMonitor Inc.	 Consolidation Target

3. High-Risk Impersonation Threats

During the analysis, external domains exhibiting high visual similarity (lookalikes) were evaluated against the infrastructure correlation engine. The following domains do not share infrastructure with Walmart and are registered at consumer-grade registrars, indicating they are unauthorized and potentially adversarial.

THREAT DOMAIN	DISCREPANCY EVIDENCE	VERIFIED REGISTRAR	STATUS
---------------	----------------------	--------------------	--------

🚩 High Risk
(Phishing)

4. Revenue & Consolidation Opportunity

Based on the discovery of 4 high-value Shadow IT domains, the following is a projection of the immediate revenue opportunity for the primary registrar to consolidate and secure this fragmented infrastructure.

Estimated Annual Recurring Revenue (ARR) Gain

SERVICE LINE	UNIT ECONOMICS	OPPORTUNITY VALUE
Domain Transfer & Renewals	4 domains @ \$150/yr (Enterprise Tier)	\$600 / yr
Advanced Security Monitoring (Blackveil)	4 domains @ \$1,200/yr (Continuous Auditing)	\$4,800 / yr
		\$13,400 / yr

** Note: This represents the opportunity from a single discovery run on a small subset of candidate domains. A full portfolio scan typically yields 10x-50x more candidates.*

Strategic Recommendations

1. Portfolio Consolidation: Present the cryptographic evidence to the Walmart security team to initiate transfer procedures for the 4 identified domains currently managed by MarkMonitor (██████████, ██████████, ██████████, ██████████), bringing them under the primary CSC master agreement.

2. **Defensive Action:** Forward the details of the unauthorized lookalike domain ([example.com](#)) to the brand protection and legal teams for immediate takedown or UDRP proceedings.
3. **Continuous Monitoring:** Enroll the newly discovered Shadow IT domains into the Blackveil automated security scanning tier to ensure compliance with corporate baseline policies (DMARC, DNSSEC, etc.).
